

Greetings,

First of all, please allow the editor to say that he is sorry for the delay in getting this issue to you. You see, in between our last meeting and Rainbow Fest alot has happened in this household...It's amazing just how a little baby can keep you from your duties. Again, sorry guys!

LAST MEETING IN REVIEW

There were three product presentations during our last meeting. If you missed them...Too bad, they were great! John Keller reviewed CoCo Paint using the X-Pad. CoCo Paint is yet another graphic software program. Where it is not CoCoMax, it is a close second and at half the price. Ed Hathaway gave a brief showing of a new video digitizer called VIDX by Grafx. Once again a close second to Micro Works DS-69, but at a far less cost. Closing out the meeting, Tony Podraza tryed to show us how to burn a ADOS chip. Due to a bad tape copy of the customized ADOS, the presentation was cut short...Sorry Tony!

JULY MEETING INFORMATION

For the July meeting, I'm sure there will be a product presentation, but at this mailing, one has not been arranged. We will however, be hearing about a very important protection program for all of your software/hardware. If for nothing else, don't miss this information.

TIB-BITS

Attached with this newsletter is a complete listing of the CoCo's memory locations. I believe you will find this information handy in allot of ways. It was published in the December '83 issue of MICRO and is reprinted with-out permission, so mom's the word!!!

OUTSIDE WORLD

Coming soon will be the Commodore 128. Having read a great deal about this new system, this is the low-down. This system will use an upgraded basic called BASIC 7.0 and in 80 columns. It's disk operating system will be CP/M Plus (3.0) with a beige screen (not blue). There will be a throw switch to boot their 64 mode, thus, staying fully compatible with existing software. Commodore claims that this systems separate 64, 128 and CP/M operating modes offer features that would be considered standard on most machines but were lacking on the 64 - including a faster drive (the 1517), 80-column display (on the new 1902 monitor) and memory expansion up to a 512K total. No prices have been set for the 128 of peripherals, yet, according to experts, expect to see it at around \$1000 (this price will include all of the above). Commodore feels that using CP/M, it will bring this system into the business world of computers.

Footnote: At the price of this NEW system, check out Tandy's 1000. MS-DOS, disk drive, 128K, etc., etc...with a sale price of \$999.95. NOW, how has the edge!!!

CLOSING NOTES

Remember, July 11th is our next meeting. For the new guys and guests, we meet at the Glenside Public Library on Fullerton Road in Glendale Heights. Our meetings start around 7:30pm and run no latter then 10:00pm. Hope to see you all there in cocoheaven! Oh, the Glenside Color Computer Club is doing a road show at the Glendale Heights Founders Day party. Details at our July meeting.

[All Numbers in Hex]

Overview

0000-03FF	Ram used by BASIC Interpreter
0400-05FF	Video Display (May be moved)
0600-0FFF	RAM for user program
1000-3FFF	Additional RAM in 16K system
4000-7FFF	Additional RAM in 32K system
8000-9FFF	Extended BASIC ROM
A000-BFFF	Basic Interpreter ROM
C000-FEFF	Cartridge ROM
FF00-FFFF	I/O and Control

Extended

0003	General Counter
0006	String Flag
0007	Flag if Garbage Collected
0019	Start of User RAM
0019-001A	BASIC Program Begin
001B-001C	Pointer to Top of Program/Begin Variables
001D-001E	Pointer to Top of Variables/Start of Arrays
001F-0020	Pointer to End of Arrays/Start of Available Memory
0021-0022	Top of Stack/Start of String Pool
0023-0024	Start of Used Area of String Pool
0025-0026	Pointer to BASIC Memory Limit
0027-0028	End of String Pool/Start of User Space
0033-0034	Pointer to Current Data Read Position
0037-0038	Current Variable Name
0041	4 Bytes Used by Tokenize
0041-0048	Start and End Address of Block Move
0041	Highest Address to Move to
0043	Highest Address to Move
0045	Lowest Address Moved to
0047	Lowest Address to Move
0047	Highest String Found
004B	Address of Descriptor of Highest String Found
004F-0054	Floating Point Accumulator #1 (6 bytes)
0056	String Length
005C-0061	Floating Point Accumulator #2 (6 bytes)

0062	Sign Comparison
0063	Extended Precision Byte
0068-0069	Current Program Line
006C	Current Column Position
006F	Device Number for Output Character (0 = Screen, \$FE = Printer, \$FF = Tape, 1-16 = Disk BASIC File #)
0070	EOF on Tape File Flag
0071	Reset Flag = \$55 for Warmstart
0072-0073	Restart Pointer (contains \$80C0-BASIC Warmstart)
0074-0075	Pointer to End of Memory
0078	File Mode (0 = None, 1 = Input, 2 = Output)
0079	Tape Working Buffer Length
007A-007B	Tape Working Buffer Pointer
007C	Tape File Block Type (0 = Header, 1 = Data, \$FF = EOF)
007D	Number of Data Bytes in Cassette I/O Block
007E-007F	Program End Address 1 after a CLOADM
0080	Checksum
0081	Cassette Error #
0082	General Counter
0083	Pulse Width Count
0084	Rise/Fall Flag
0085	Last Sine Value
0087	Last Key Entered
0088-0089	Pointer to Current Cursor Position
008A-008B	Serial Read # of Tries
008C	Sound Frequency
008D-008E	Duration of Sound
008F	Start of Area Downloaded from ROM
0092	Controls Length of Unmodulated Carrier Preceding Cassette I/O
0094	Cursor Color
0095-0096	High and Low bytes of Baud Rate Code (Normally \$0057)
0097-0098	Carriage Return Delay (Normally \$0001)
0099	Comma Field Width (Normally \$10)
009A	Last Comma Field (Normally \$70)
009B	Printer Line Width (Normally \$84)
009C	Affects positions of Vars. Line-printed in Comma Fields (\$00)

009D-009E	Transfer Address after CLOADM
009F	Start of get next character subroutine
00A5	Start of get same character subroutine
00A6	Next Character Pointer
00A8-00AA	Jump Vector to Print OK
00AB-00AE	Extended Product Area
00AF	Trace Flag
00B5	Current Color
00B6	Current PMODE
00B7-00B8	End of Screen1
00B9	Number of Bytes per Line
00BA-00BB	Address of Graphics Page
00BC	\$E = Disk system, \$6 = No disk
00BD	X1
00BF	Y1
00C1	Color Set 1 = 8
00C3	X2
00C5	Y2
00D7	Temp
00DB	Change Flag
00E6	DLOAD Baud Rate
00E7	Input Timeout Constant
00EA	Operation Code
00EB	Drive Number
00EC	Track
00ED	Sector
00EE	Buffer Address
00F0	Status Returned
0100-0102	Software Interrupt 3 Called by Vector at \$FFF2
0103-0104	Software Interrupt 2 Called by Vector at \$FFF4
0105-0108	Software Interrupt 1 Called by Vector at \$FFFA
0109-010B	Non-Maskable Interrupt Called by Vector at \$FFFC Set to \$D7AE by Disk
010C-010E	Interrupt Request Called by Vector at \$FFF8 Set to \$A9B3/Set to \$894C by Extended/Set to \$D7BC by Disk
010F-0111	Fast Interrupt Vector Called by Vector at \$FFF6/Set to \$A0F6
0112-0113	High and low bytes of TIMER
0116-0117	Seed for RND Function
011A	Shift Lock Flag
011C	Keyboard Delay Constant
011D-011F	Jump vector to \$8489-Print OK
0120-013C	Token Table Directory(Byte 1 = # of Keywords, Byte 2,3 = Address of Table, Byte 4,5 = Address of Subroutines)
0120-0124	BASIC Commands
0125-0129	BASIC Functions
012A-012E	Extended BASIC Commands
012F-0133	Extended BASIC Functions
0134-0138	Disk BASIC Commands
0139-013C	Disk BASIC Functions
013E-013F	Address for USR0
0140-0141	Address for USR1
0142-0143	Address for USR2
0144-0145	Address for USR3
0146-0147	Address for USR4
0148-0149	Address for USR5
014A-014B	Address for USR6
014C-014D	Address for USR7

014E-014F	Address for USR8
0150-0151	Address for USR9
0152-0159	Keyboard Rollover Table
015A-015D	Joystick Readings
015A	Left Joystick Up/Down
015B	Left Joystick Left/Right
015C	Right Joystick Up/Down
015D	Right Joystick Right/Left
015E-0160	Open Device Hook Called at \$A5F6/Set to \$C426 by Disk
0161-0163	Device Number Check Called at \$A5B9/Set to \$C838 by Disk
0164-0166	Return Device Parameters Called at \$A35F/Set to \$C843 by Disk
0167-0169	Character Output Called at \$A282/Set to \$8273 by Extended/Set to \$CB4A by Disk
016A-016C	Character Input Called at \$A176/Set to \$BCF1 by Extended/Set to \$C58F by Disk
016D-016F	Check File OPEN for Input Called at \$A3ED/Set to \$C818 by Disk
0173-0175	Close All Open Files Called at \$A426/Set to \$CA3B by Disk
0176-0178	Close One File Called at \$A42D/Set to \$8286 by Extended/Set to \$CA4B by Disk
0179-017B	Print Using Called at \$B918/Set to \$8E90 by Extended
017C-017E	File Item Scanner Called at \$B061/Set to \$CC5B by Disk
017F-0181	Break Key Check Called at \$A549/Set to \$C859 by Disk
0182-0184	Get Line From Keyboard Called at \$A390/Set to \$JP RTS by Disk
0185-0187	Finish Loading ASCII File Called at \$A4BF/Set to \$CA36 by Disk
0188-018A	Check End Of File Called at \$A5CE/Set to \$C860 by Disk
018B-018D	Evaluate Operand Called at \$B223/Set to \$8846 by Extended/Set to \$CDF6 by Disk
018E-0190	User Error Called at \$AC46/Set to \$JP RTS by Disk
0191-0193	Error Called at \$AC49/Set to \$88F0 by Extended/Set to \$C24D by Disk
0194-0196	Run Called at \$AE75/Set to \$829C by Extended/Set to \$C990 by Disk
0197-0199	Hex & Octal Called at \$BD22/Set to \$87E5 by Extended
019A-019C	Execute Line Called at \$AD9E/Set to \$82B9 by Extended
019D-019F	Graphics Address Called at \$A8C4
01A0-01A2	CLS,GET,PUT etc. Called at \$A910,\$975C,\$8AFA,\$8162 Set to \$C29A by Disk
01A3-01A5	Tokenize Called at \$B821/Set to \$8304 by Extended
8000-9FFF	Extended BASIC ROM
01D1	Tape File Length
01D2-01D9	Tape File Name
01DA-02D8	Cassette Buffer
01DA-01E1	CLOADM File Name
01EA-01E6	EXEC Address from Tape

01E7-01E8	Load Address from Tape	94A1	Draw Line
02DC	Contains token for first keyword in BASIC Statement	94E2	The Draw Line Loop
02DD-03DC	Console I/O Buffer	9506	Move Up, Down, Left, Right Routines
0400-05FF	Lo-res screen	9532	PCLS
0600-35FF	Possible Graphic Screens	9546	COLOR
0600	Bottom of program area/No Disk	9621	PMODE
0600-06FF	Disk Buffer	9670	SCREEN
0700-07FF	Disk Buffer	968B	PCLEAR
0800-0927	Drive Table	9710	Compare Two Points
097E	Table of Current Tracks	9723	PCOPY
0982	NMI in use flag	9755	GET
0983	NMI JMP	9758	PUT
0985	Motor shutoff counter	98EC	PAINT
0986	Current latch data	9A22	PLAY
0C00	Program Start/Disk System	9CB6	DRAW
0FFF	Top of memory (4K)	9E9D	CIRCLE
3FFF	Top of memory (16K)	A000-BFFF	BASIC ROM
7FFF	Top of memory (32K)	A000-A001	Address of Check Keyboard
8000-9FFF	Extended BASIC ROM	A002-A003	Address of Character Out
807F	Cold Start to BASIC without size Search and Workspace init. Resets pointers to Start of BASIC Program	A004-A005	Address of Cassette Read On
80C0	Warmstart to BASIC. Does not Reset Pointers to Start of BASIC Prog	A006-A007	Address of Block In
8183-81EF	Extended Command Token Table	A008-A009	Address of Block Out
81F0-821D	Subroutine Entry Addresses	A00A-A00B	Address of Joystick In
821E-8256	Extended Function Token Table	A00C-A00D	Address of Header Out
8257-8272	Subroutine Entry Addresses	A00E	Secondary Reset
82B9	Break or Stop Routine	A027	Primary Reset
82BB	Extended interpret loop	A06E	Hardstart (After Reset)
8378	COSine	A0A6	Check for Disk ROM
8381	TANgent	A0CB	Check for Extended ROM
83B0	ArcTaNgent	A0D7	Print Version
8446	LOG	A0E8	Softstart (After Reset)
8480	SQuare Root	A0F6	FIRQ Entry (ROM Pack Check)
84F2	EXPOntial	A10D	Start of Area Downloaded to RAM at \$8F
8524	FIX	A129	Start of Area Downloaded to RAM at \$10C
8533	EDIT	A171	Input Character, Bit 7 Clear
86A7	TRace ON	A176	Input Character
86A8	TRace OFF	A199	Blink Cursor Color
86AC	POSition	A1B1	Wait for Keypress and Read Kybd; Char Returned in A Register
86BE	VARIABLE PoiNteR	A1C1	Check Keyboard and Get Key if pressed; Z = 1, A = 0 if no key Z = 0, A = key, B and X Preserved
874E	STRINGS	A26E	Table of Codes for non-alpha keys
877E	INSTRing	A282	Output Character to Device Specified by \$6F, All But CC Preserved
8871	DEFine	A2BF	Output Character in A to Printer (RS232)
8968	TIMER	A30A	Output Character in A to Screen
8970	DELeTe	A390	Input Line from Keyboard into Buffer at \$02DD; Return X\$02DC; Zero byte at End of Buffer
8A09	RENUMber	A416	CLOSE
8BDD	HEXS	A44C	CSAVE
8C18	DownLOAD	A46C	Perform CSAVEM Function; Requires Start of Memory Block in \$19-A0 and in \$01E7-8, Transfer Address in \$01E5-6, and File Name in \$01D2-9. Enter with A = 2 and X = 0.
8DBC	Input Serial Character	A498	CLOAD
